WILL YOU SPEND \$2 TO SAVE YOUR HAIR?

How many hard-earned dollars have you spent to save your hair? How many hair tonics, conditioners, restorers, chemical dressings, have you tried in the last few years — with no success? How many times after an unsuccessful hair growing attempt have you sworn not to spend an other cent on another hair treatment?

Yet you buy the next product that comes on the market with hair-growing claims.

CAN YOU GROW HAIR?

Doctors who have spent a life time studying hair and hair growth have concluded that nothing new known can grow hair on a bald head. So if you have bald patches to spare the rest of your life that way. Accept it philosophically and quit spending hard-earned dollars on hair geymers.

If you can't grow hair—what can you do? Can you stop excessive hair loss? Can you save the hair you still have? Can you increase the life expectancy of your hair? Probably.

Please read every word in the rest of this advertisement carefully, since it may mean the difference to you between saving your hair and losing the rest of it to eventual baldness.

HOW TO SAVE YOUR HAIR

Many scalp, hair loss, dandruff, very dry or oily scalp, are symptoms of the body disease called ichthyosis. These scalp symptoms are often warnings of approaching baldness. Not every case of ichthyosis results in baldness, but doctors now know that men and women who have this scalp disease usually lose their hair.

Ichthyosis is hereditary and caused by three poisonous germ organisms (*Microphythoascus, albus, pityrosporum ovale, marseillensis*). These germs first infect the sebaceous glands and later spread to the hair follicles. The hair follicles atrophy, no longer can produce new hairs. The result is "itching," redness and baldness.

The machine within your car has just one safety job: to keep the passengers from getting hurt by moving parts. That's the job of the seat belt. It's not just a piece of fabric that you can take off and put on. It's a piece of machinery that's designed to keep you safe. It's a piece of machinery that's designed to keep you safe. It's a piece of machinery that's designed to keep you safe.

The results show that the power of the test increases with sample size, and that the power is higher for the proposed test than for the traditional test.

N. B. I. certainly strongly supports the idea, even if it is, as I think, too large. It is a pity that the plan of printing a separate issue for the journal is not possible, as it is not yet possible to print a separate issue for the journal.

THE MUSEUMS
The first of our institutions is the *Museo de Historia Natural*, which is the largest and most important. It is located in the heart of the city, near the Plaza de Armas. The museum is a large, modern building with a glass facade. It houses a vast collection of natural history specimens, including plants, animals, and minerals. The museum is open to the public and is a popular destination for visitors of all ages.

It is to be noted that the above figures are based on the following assumptions: (1) the average life expectancy of the population is 75 years; (2) the average number of children per woman is 2.1; (3) the average number of children per woman is 2.1; (4) the average number of children per woman is 2.1.

Our research has been greatly appreciated by several friends and family members for their interest and encouragement.

MAKE MONEY, TOO!

There are a number of other factors that can affect the results of a survey. For example, the way the questions are asked can influence the answers. The order of the questions can also be important. The way the survey is distributed can also affect the results. For example, if the survey is only distributed to a certain group of people, the results may not be representative of the entire population. It is important to be aware of these factors when interpreting the results of a survey.
